SUMMARY

Final-year Computer Science student and aspiring Software Engineer with hands-on experience in full-stack development, applied machine learning, and intelligent automation. Driven by a continuous learning mindset, actively building robust web applications and autonomous workflows using Python, React, and n8n. Combining a strong grasp of core software architecture with practical model training experience to engineer scalable, data-driven solutions for real-world problems.

PROJECTS

Computer Vision Researcher | *Ongoing*

AI for the Visually Impaired (Research Paper)

- Authoring a research paper focused on deploying AI-driven spatial awareness and assistance systems for visually impaired individuals.
- Training, fine-tuning, and evaluating YOLO-based object detection models (including YOLOv8 and zero-shot configurations) for real-time environmental analysis.
- Managing the end-to-end machine learning pipeline, including custom dataset creation, image annotation, and model optimization for fast inference.

Priceyra (Final Year Project)

AI-Powered Price Tracking & Decision Support Platform

Feb 2026 – Present

- Phase 1 Execution: Successfully completed the comprehensive system documentation, software requirements specification (SRS), and full architecture design.
- Frontend Architecture: Engineered the complete high-fidelity frontend platform using React, implementing a high-end, responsive user interface optimized for performance and real-time state management.
- System Design (Target Architecture): Architected the core blueprints for autonomous web scraping pipelines and machine learning infrastructure. The backend is designed to track e-commerce prices dynamically across various platforms and deploy a real-time inference layer to deliver predictive "Buy/Wait" suggestions and AI discount-suggesting alerts.

Slate-Reminder-Bot

LLM-Driven Academic Automation Assistant

- Programmed an autonomous Python bot that web-scrapes university LMS calendars to track assignment deadlines and exam schedules.
- Hooked the system into the WhatsApp API to push real-time alerts directly to end-users.

- Implemented a conversational natural language layer powered by the Gemini LLM for real-time schedule inquiries.

Acrab-Creative

Digital Design Agency Platform

- Co-founded and developed the official web portfolio for a creative agency delivering high-end 2D/3D art and digital web solutions.
- Programmed the application in React, leveraging a brutalist, minimalist visual style optimized for fast rendering speeds.

SABOOR.OS

Interactive 3D Graphics Portfolio

- Conceptualized and deployed an interactive 3D web platform showcasing systems architecture, built using Three.js and Firebase.
- Integrated custom interactive graphic rendering pipelines with high-performance responsive styling.

SKILLS

- **Workflow Automation & Systems:** n8n, Zapier, Autonomous Data Pipelines, Advanced Web Scraping, REST API Integration.
- **Backend Development:** Python, C++, MySQL, PostgreSQL, MongoDB, Firebase, Vercel, SQL Protocol Optimization.
- **Frontend Architecture:** React, Next.js, Three.js, Tailwind CSS, Framer Motion, Responsive UI/UX.
- **AI & Machine Learning:** Model Training & Fine-Tuning, YOLO (YOLOv8, Custom Variations), Zero-Shot Learning, Data Labeling, LLM Integrations (Gemini API).
- **Core Competencies:** Data Structures & Algorithms, Object-Oriented Programming, System Architecture, Agile Methodologies, Strong problem solving & Interpersonal skills

EXPERIENCE

Mavericks United

Remote Business Developer Executive

Aug 2025 – April 2026

- Orchestrated advanced B2B client relations, successfully expanding international market reach for digital IT services.
- Mentored cross-functional teams and leveraged technical expertise to close high-value software augmentation contracts.

Business Developer Intern

April 2025 – July 2025

- Deployed analytics-driven technical workflows and automated data pipelines to optimize sales conversion cycles.
- Bridged technical project requirements with client deliverables to streamline onboarding.

Software Engineer Intern

Feb 2025 – March 2025

- Engineered automated Python web-scraping scripts for *Mavericks United* to extract high-volume data from major job portals (ZipRecruiter, Adzuna), accelerating lead generation for the Business Development department.
- Built and optimized foundational software workflows, transitioning technical system architectures into business-ready operations.

Orbiz Tech

Software Engineering Intern

May 2024 – August 2024

- Engineered scalable backend modules to support high-performance enterprise application infrastructure.
- Optimized nested SQL protocols and streamlined cross-service latency across critical enterprise APIs.

Canie Communications Pvt Limited

Outbound Sales Agent

June 2023 – September 2023

- Operated high-volume outbound network strategies and systematically analyzed client engagement metrics.
- Bridged systemic onboarding gaps, driving a substantial spike in user retention and long-term brand loyalty.

EDUCATION

Bachelor of Science in Computer Science:

University of Lahore, Pakistan

Feb 2023 – Jan 2027 (*Expected*)

- Currently in 8th Semester.

INTERESTS

Music Production & Songwriting: Composing and producing beat structures using FL Studio, alongside writing and recording Urdu and Punjabi hip-hop and rap lyrics.

Gaming & Hardware: Avid player of story-driven and Souls-like games, having completed an extensive library of major AAA titles, Enthusiastic about PC hardware.
